Open issue or plan for next Sprint
_____

We have four epics namely: Documentation, Employee, Student/Candidate, Admin. The priority of stories has been decided according to feature as well as technical dependencies. This will decrease the time for implementation as well as improvement in the quality of the problem because of code reusability.

We are planning to implement below stories for the next sprint as additional features:

1. Epic 1: User | Employer

Title: As the employer, I should be able to edit my profile information.
Acceptance Criteria: 1. User should be registered.   2. User should be able to see their information.   3. User should be able to edit their information.   4. User should be able to see updated information.
SubTask: 1. Develop UI for editing employer information.   2. Develop API for editing and updating employer information.   3. QA
Story Point: 3

Title: As the Employer, I should be to receive an email if any candidate applies for my job posting
Acceptance Criteria: 1. Employer should be registered.   2. Employer should have active job posting.
SubTask: 1. Develop functionality for sending email   2. QA
Story Point: 3

2. Epic 2: User | Student/Candidate

Title: As the candidate, I should be able to edit my profile information.

Acceptance Criteria:
    1. User should be registered.
    2. User should be able to see their information.
    3. User should be able to edit their information.
    4. User should be able to see updated information.

SubTask:
    1. Develop UI for editing employer information.
    2. Develop API for editing and updating employer information.
    3. QA

Story Point: 2

Title: As the candidate, I should be able to receive email if any employer reviews my job application

Acceptance Criteria:
    1. User should be registered
    2. User should have applied for the job.

SubTask:
    1. Develop functionality for sending email
    2. QA

Story Point: 2
